

Brain labeling, feature identification and shape analysis of:

Anatomical, functional, and diffusion magnetic resonance imaging (MRI)

research asst. professor

psychiatry and behavioral science

stony brook university

Why label and quantify brain features?

Labels visually augment anatomy

- teach anatomy
- guide surgery

Labels break up data

- process data by region
- quantify and report data by region

Labels identify corresponding objects

- communicate using the same terms
- compare data across subjects and studies
